

# STYLISH *presets*

IPHONE  
USER MANUAL

[VIDEO INSTRUCTIONS](#)

Download the presets and the  
"Lightroom" app to your  
smartphone.

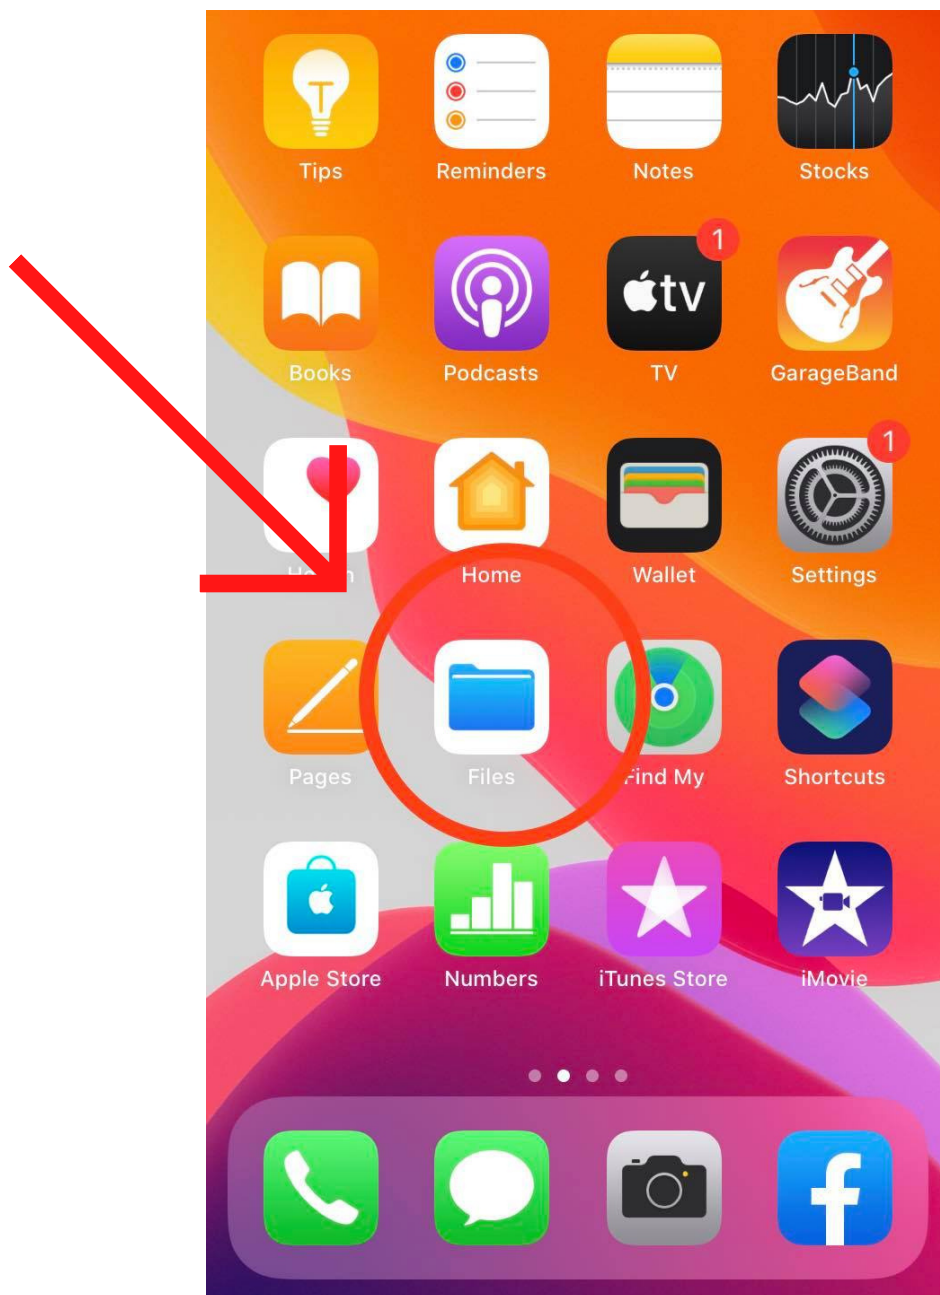

The app is free.

---

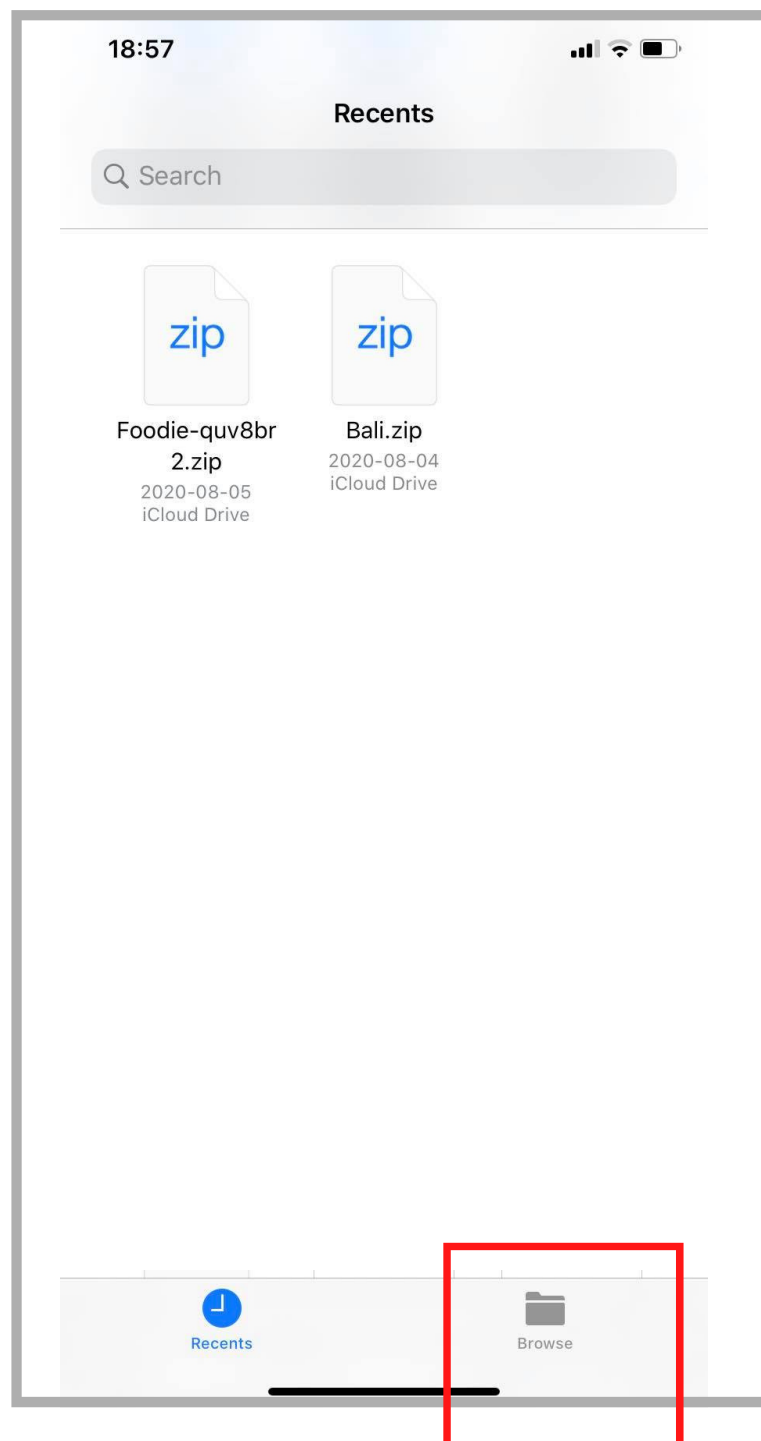

## Save your presets

Zipped folder with the presets will be found in the "Files".

## Save your presets

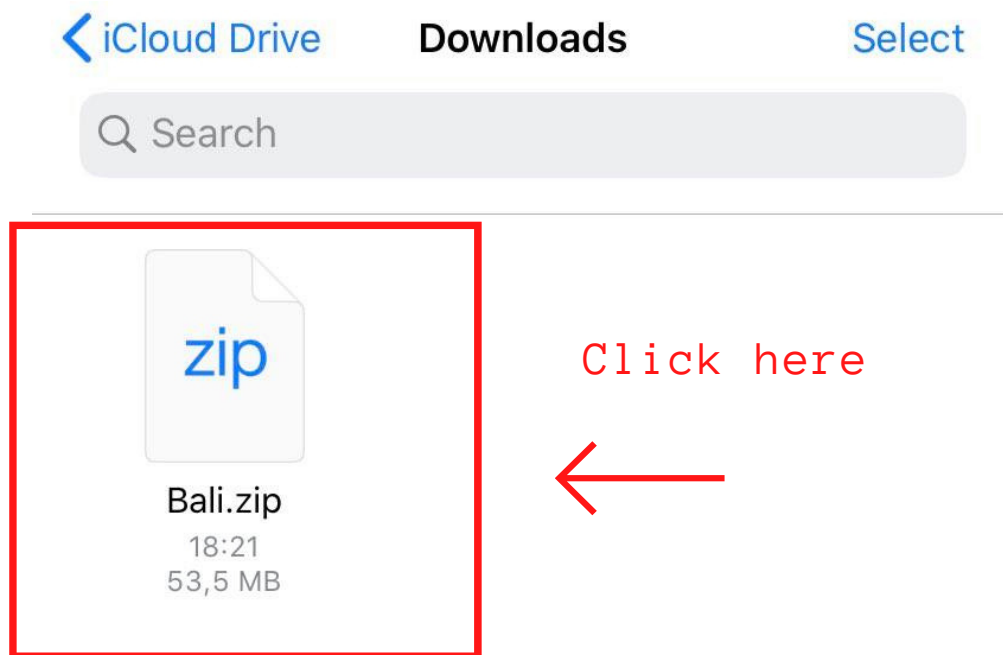

Zipped folder with the presets  
will be found in the "Files".  
Open the "Files" and click "Browse".

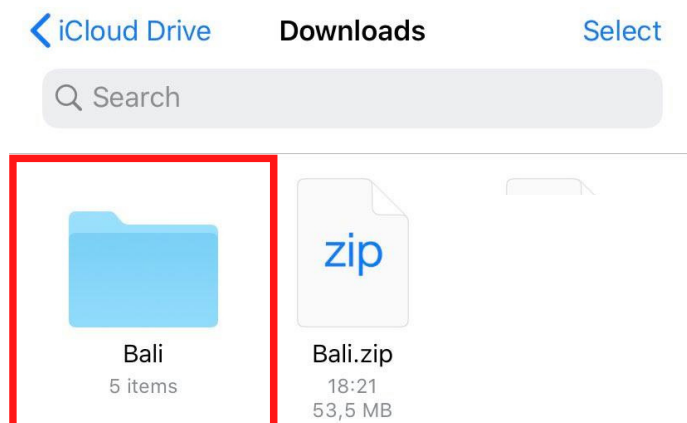

## Save your presets

Click on the ZIP file to extract it.

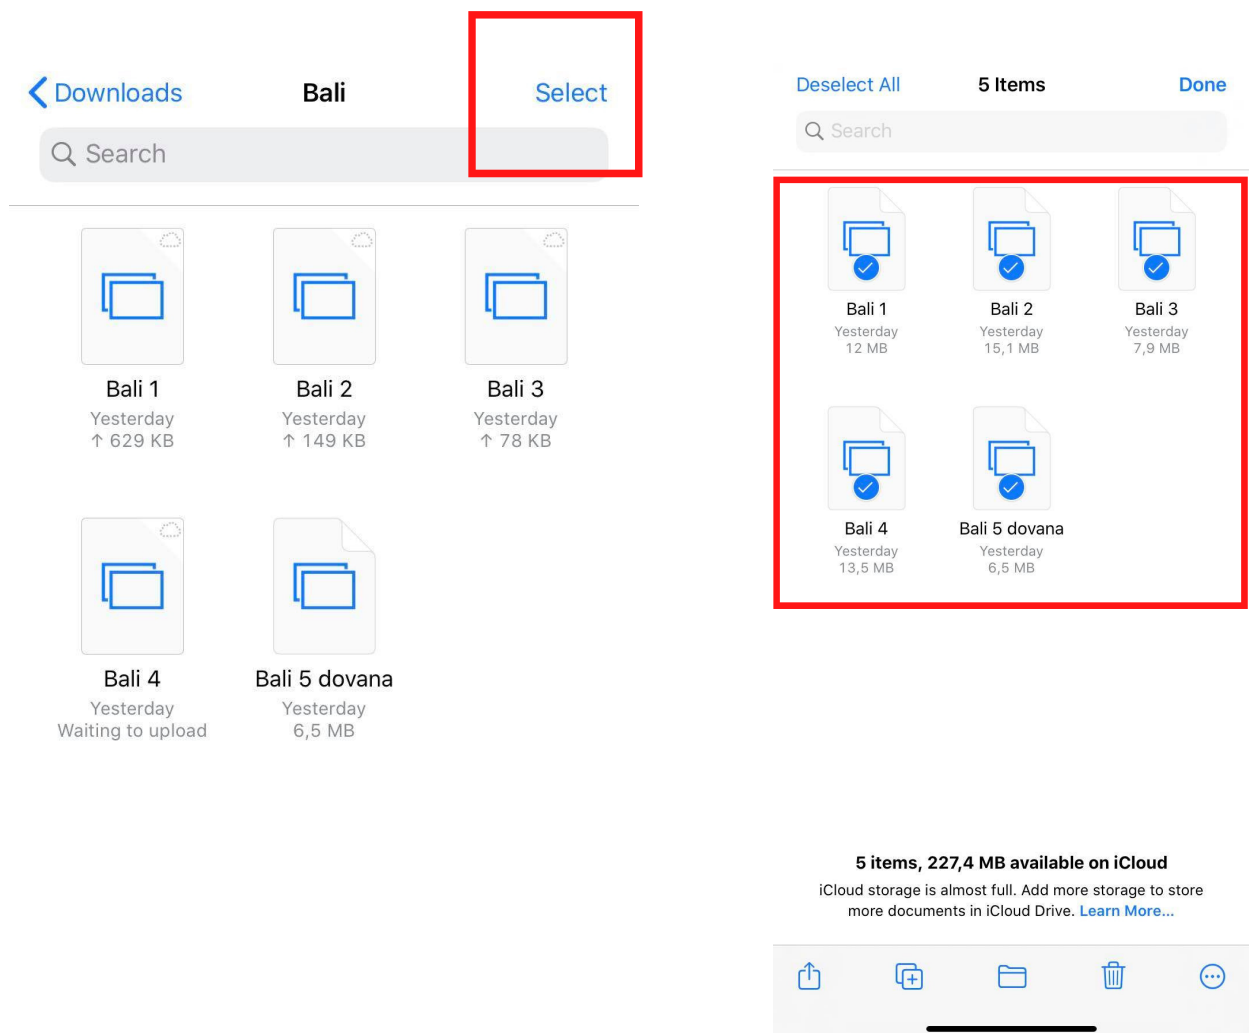

Click on the file to extract it. A new folder with the presets will appear. Open it.

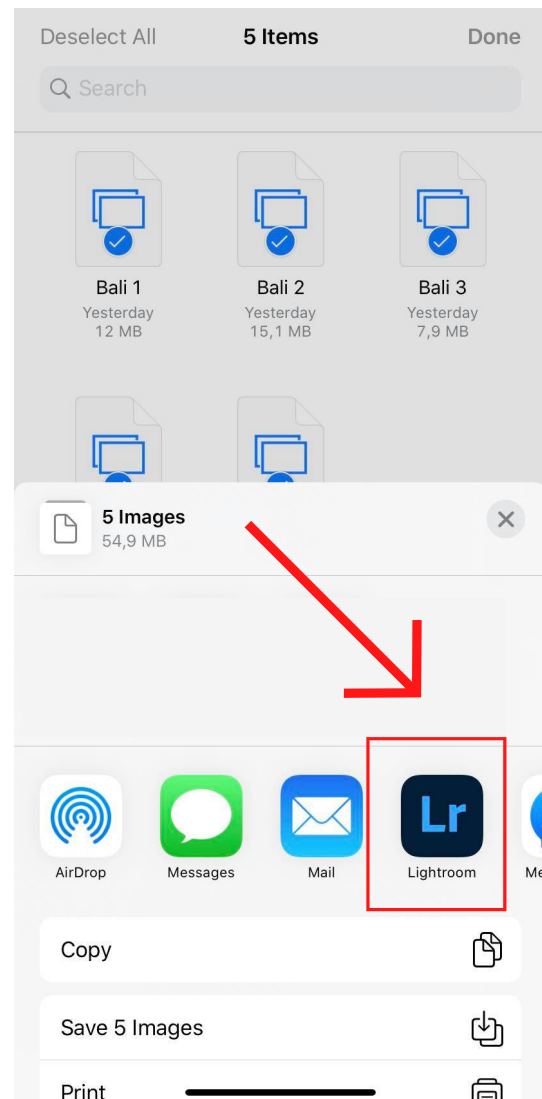

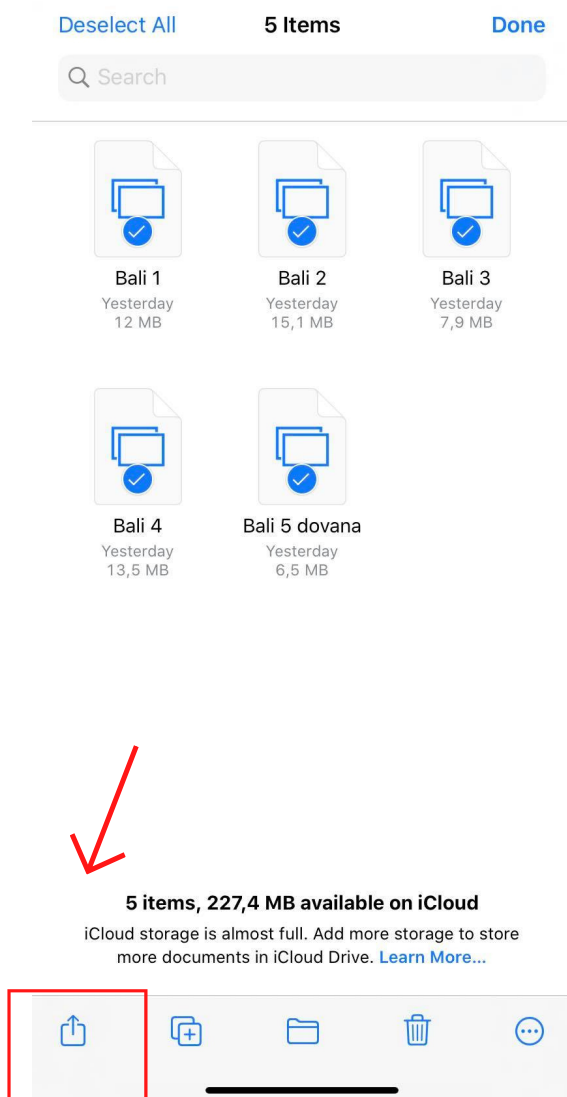

# Upload presets to your Lightroom app

Open the preset file and select all off  
them.

# Upload presets to your Lightroom app

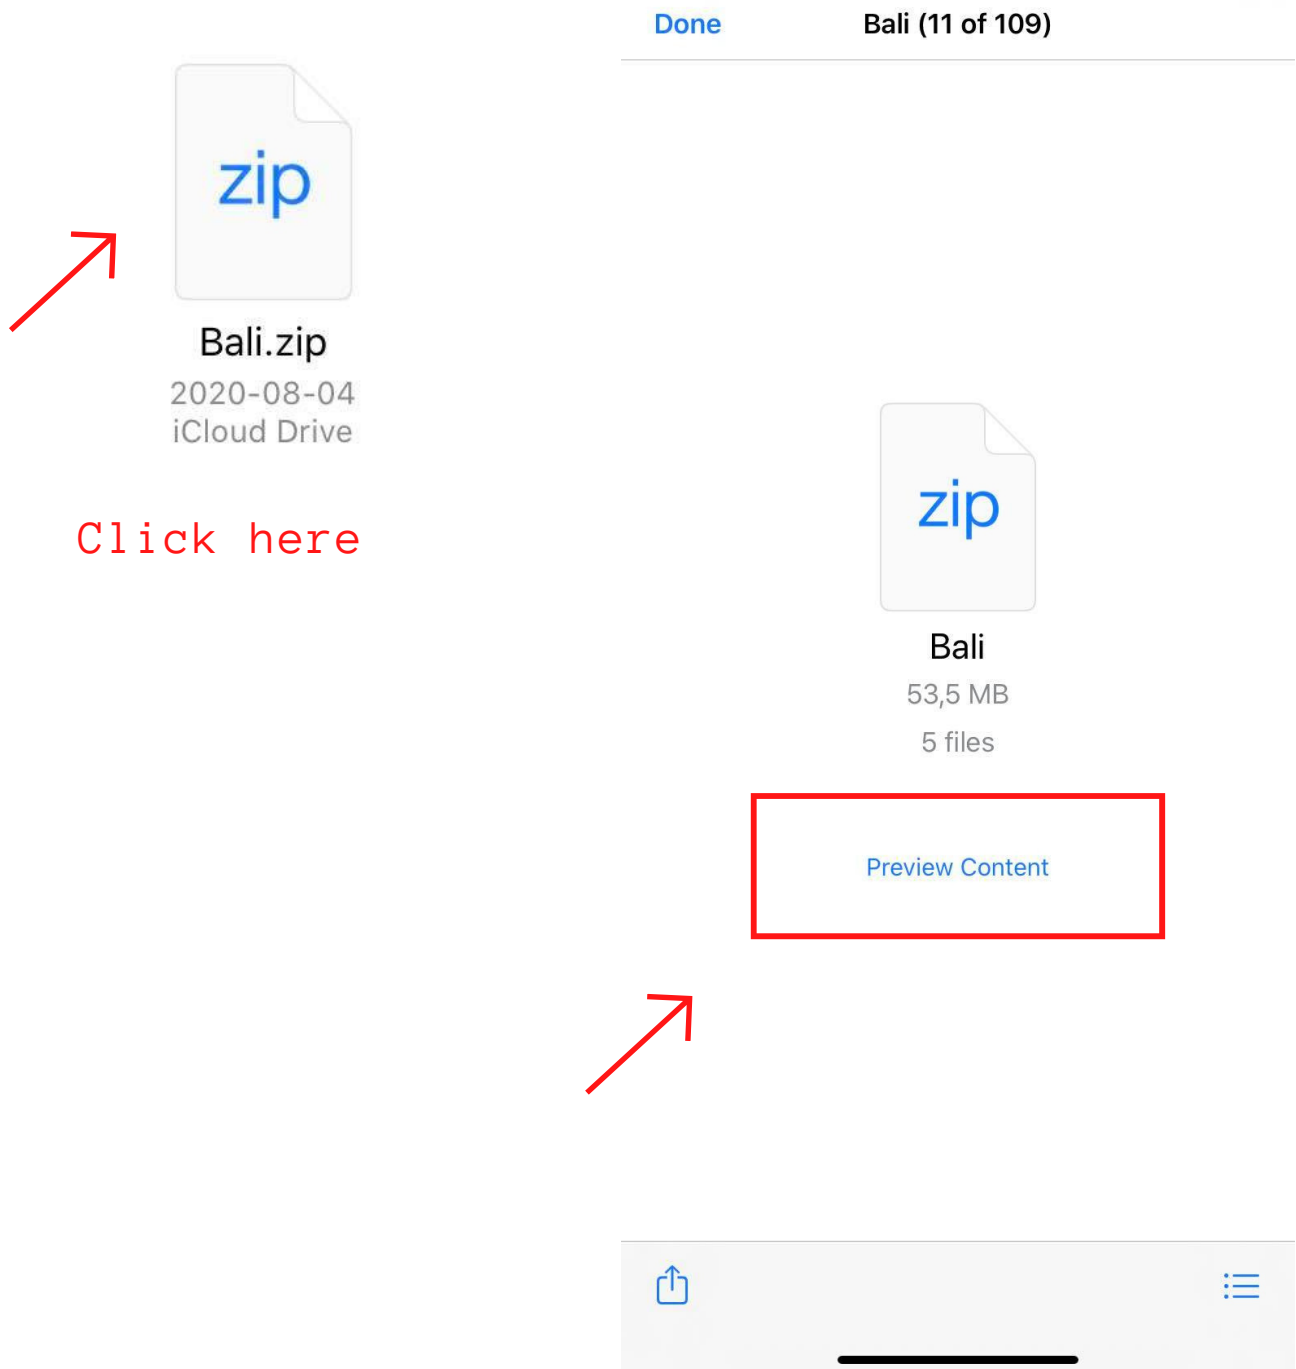

Click the arrow icon below. Select the Lightroom app and click "Got it" if such a notification arise.

If you succeed, proceed to the section "Open the Lightroom app".

## IF THE STEP ABOVE FAILS:

If a blue folder with all the preset files does not appear, click on the Zip file and select "Prievew content".

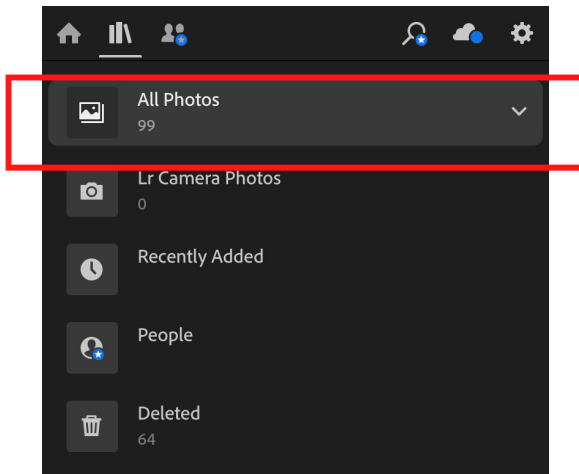

You will access all of the presets by sliding this page to the right. Click the arrow icon below and select "Lightroom". Repeat the same step for each preset.

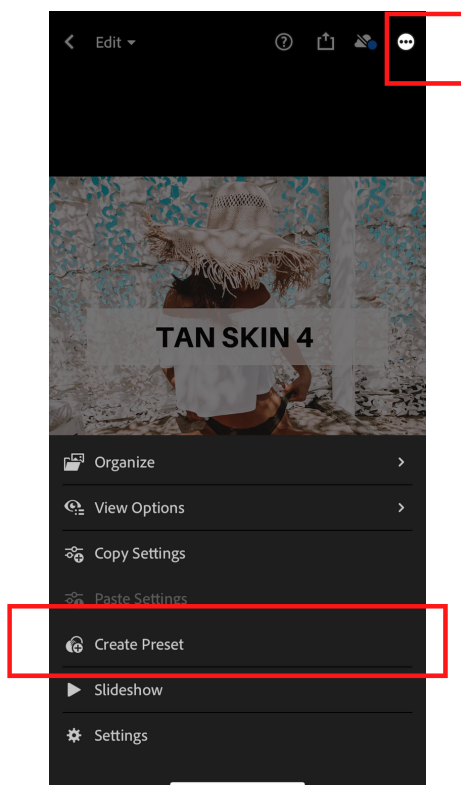

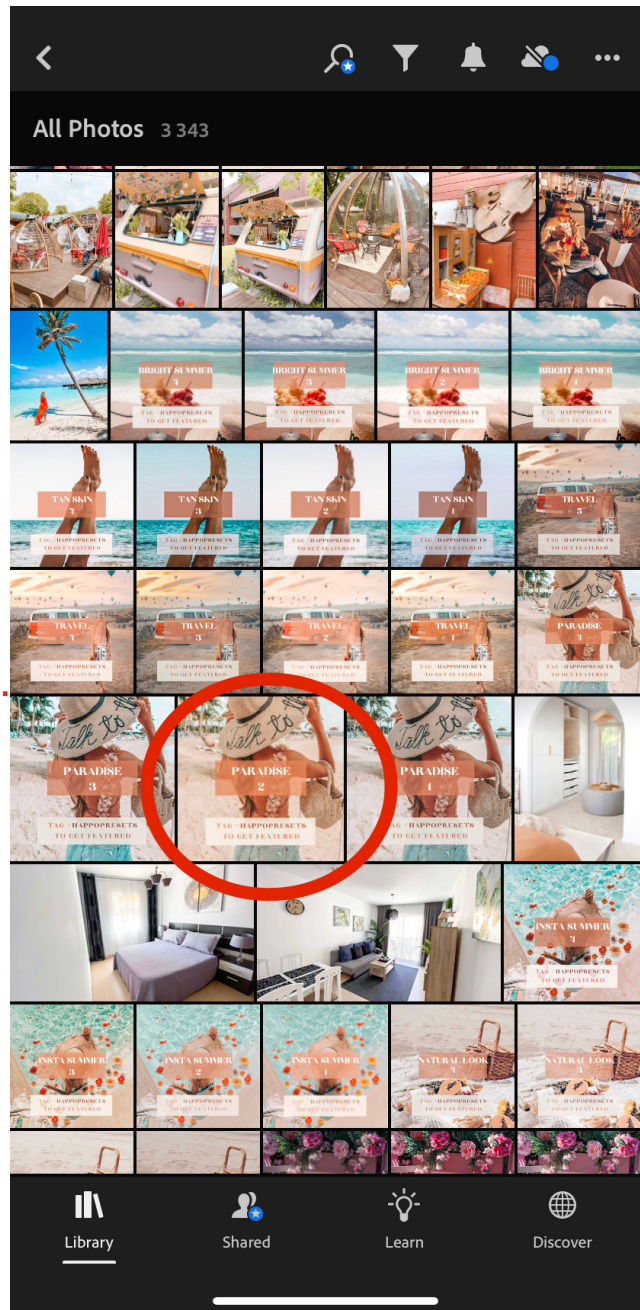

# Open the Lightroom app

Open the Lightroom app and select "All photos".

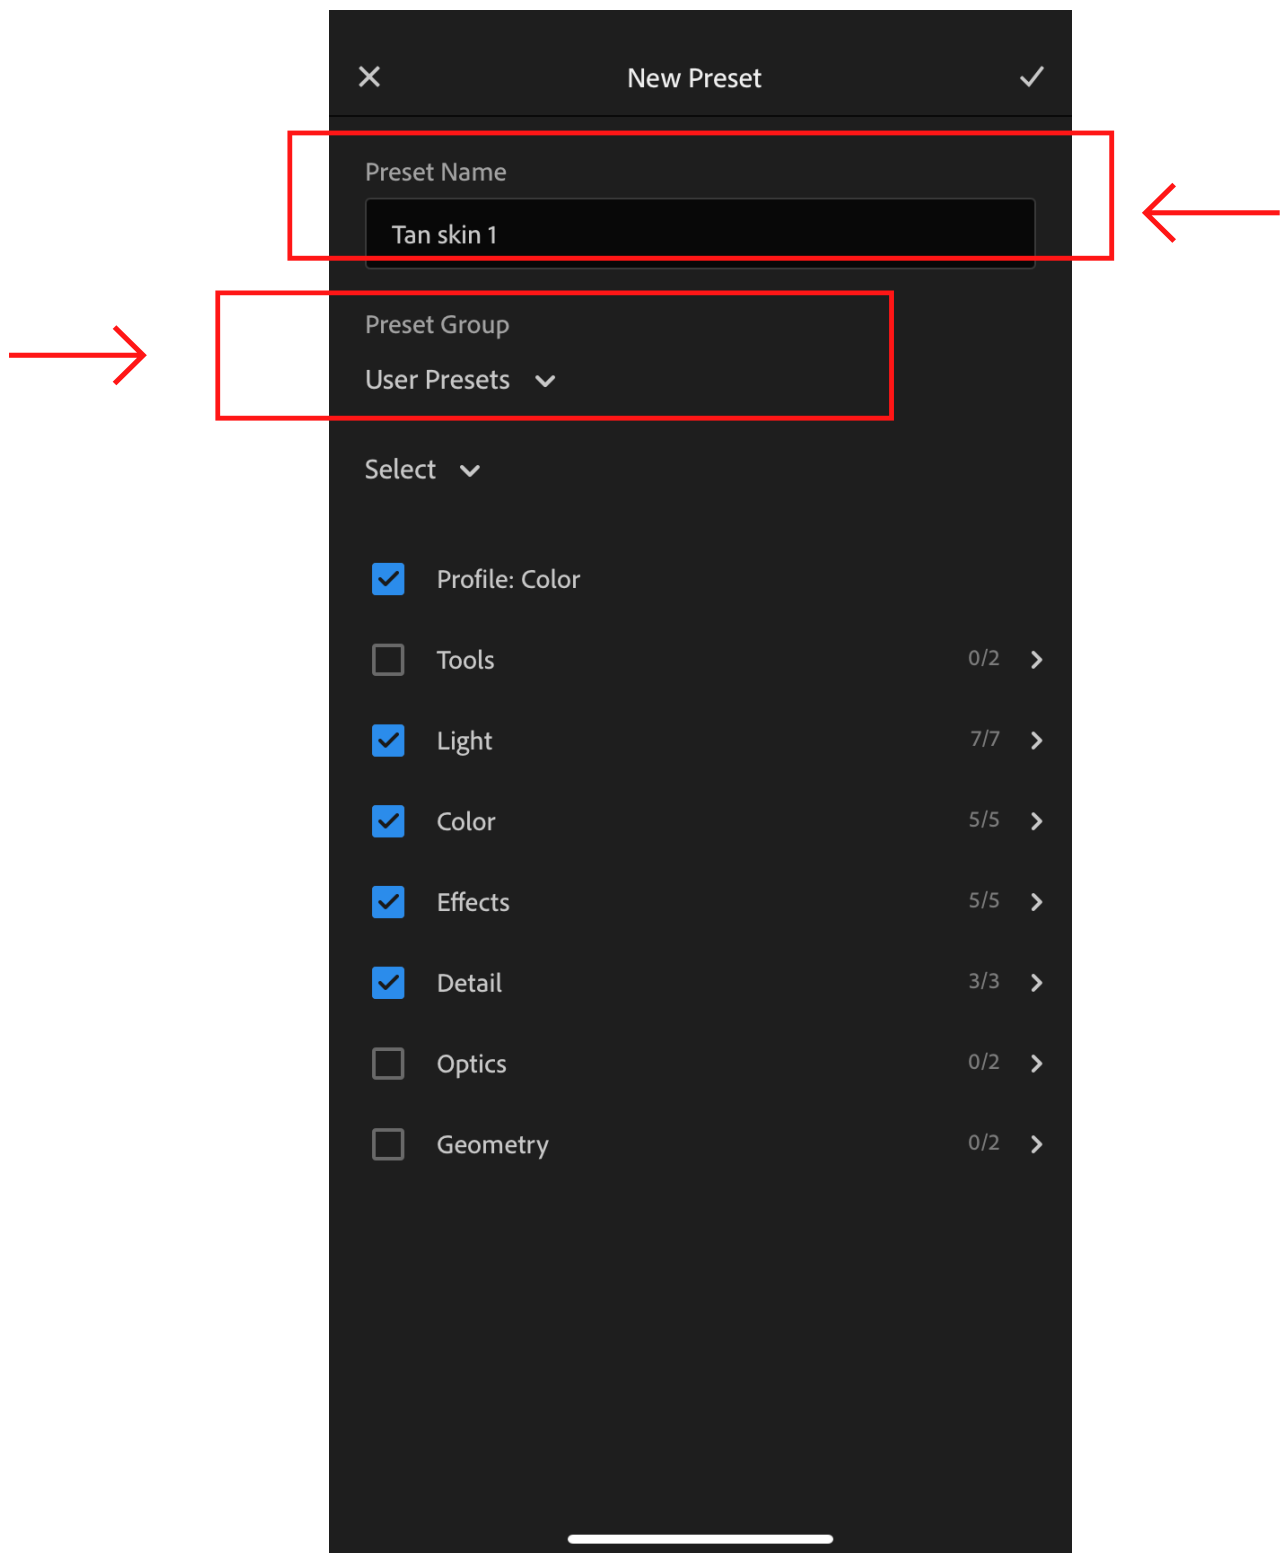

The uploaded presets will look like photos. →

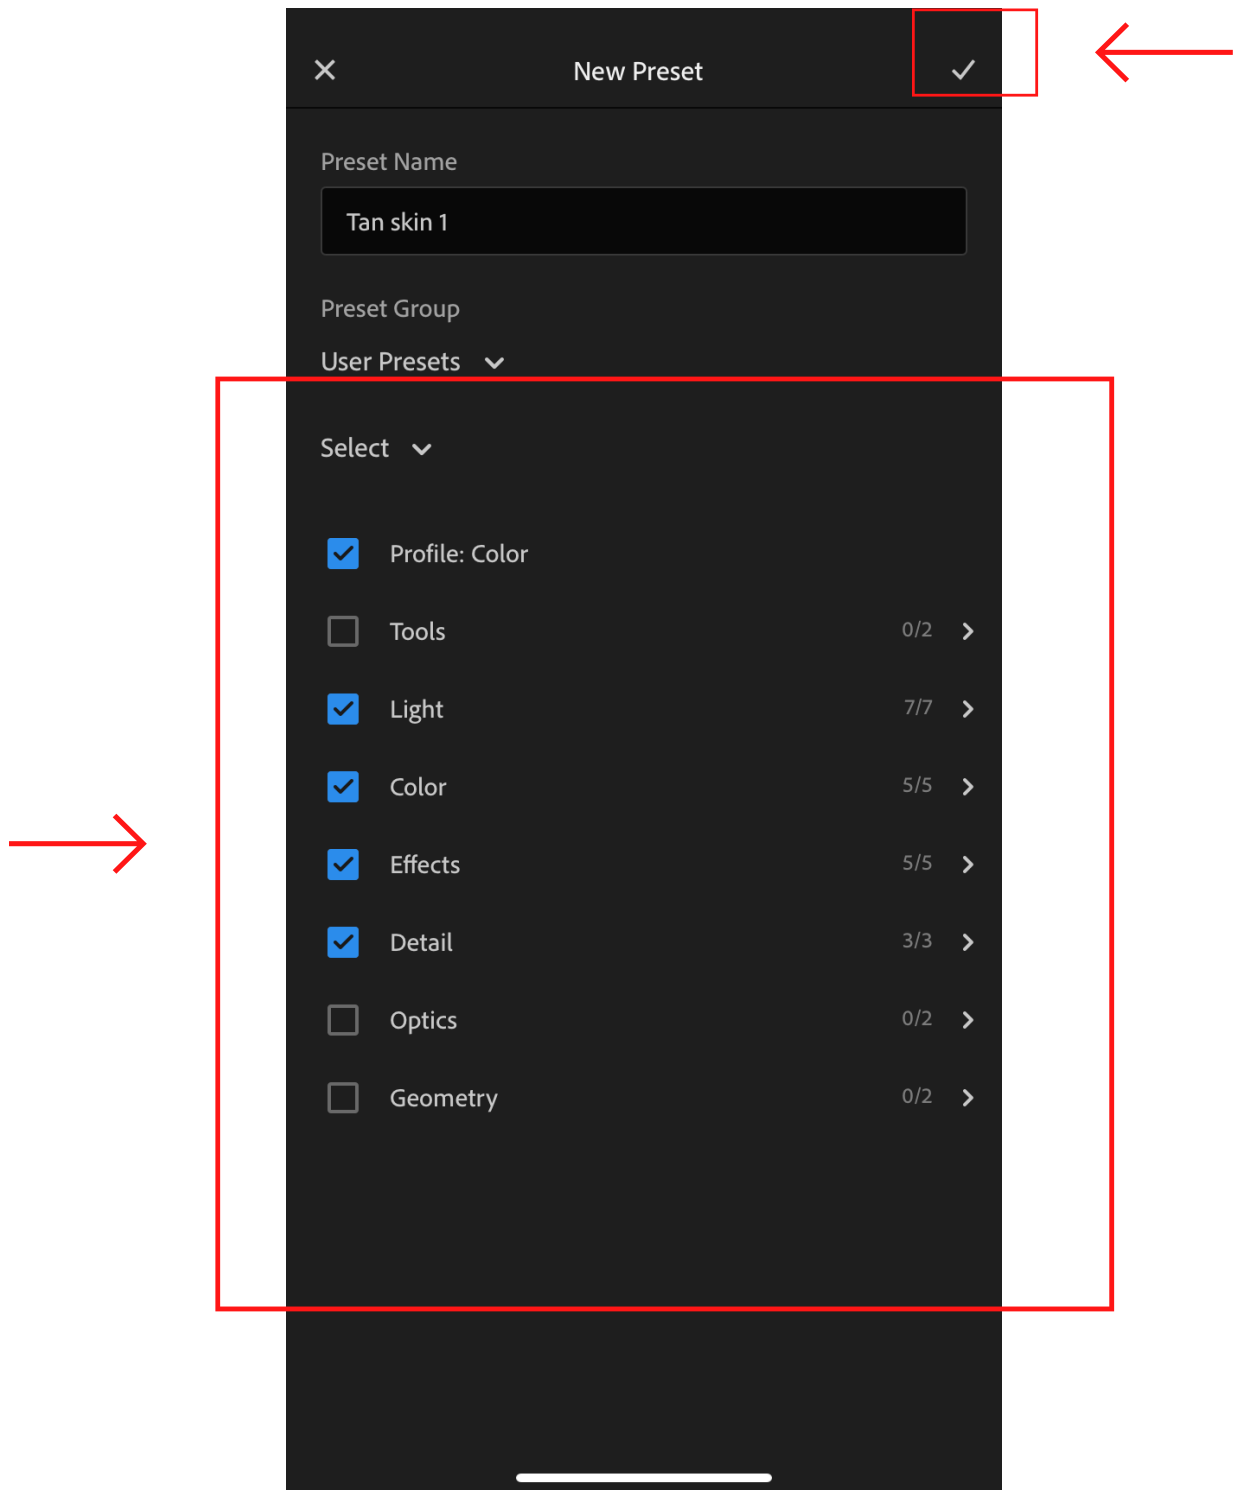

Open each photo (preset), click on the three-point button in the top right-hand corner and select "Create Preset".

Create a name for the preset and choose a preset group you want to save it in. We recommend to leave it as it is ("User presets") so that you can always access it easily.

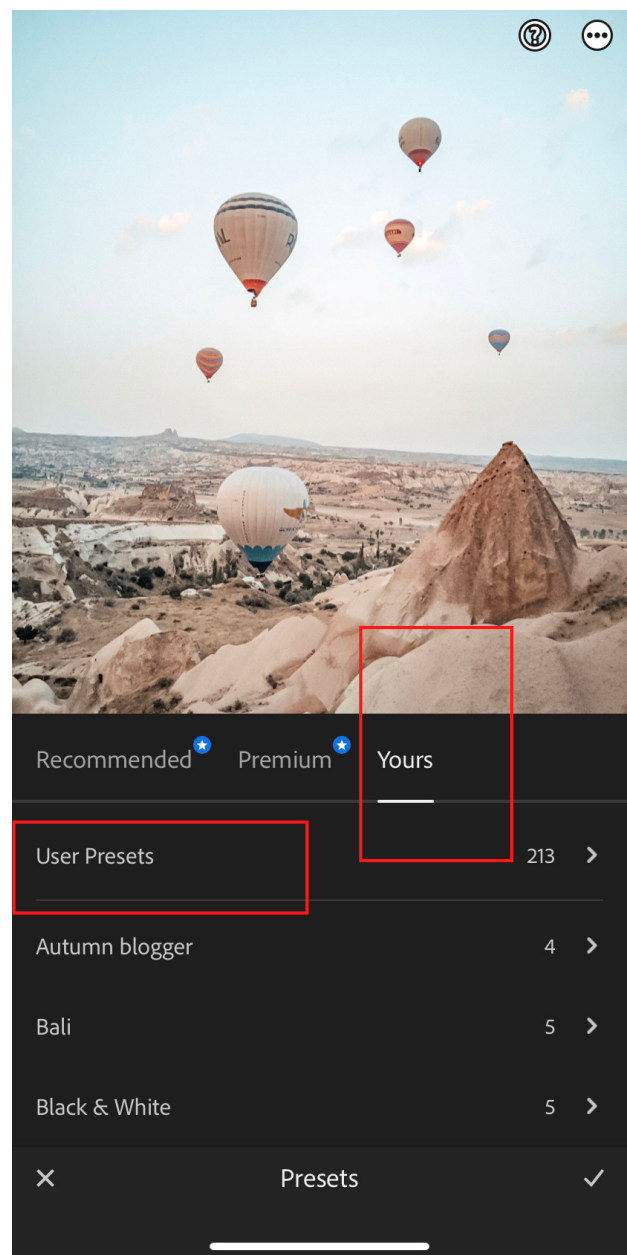

Do not change the existing check marks on "Color", "Light", "Effects", and other settings. Save the preset by clicking a check mark at the top right-hand corner.

The preset is saved, you can already try it on your photos. Upload a photo you want to edit.

Open it and click "Presets" -> "Yours".

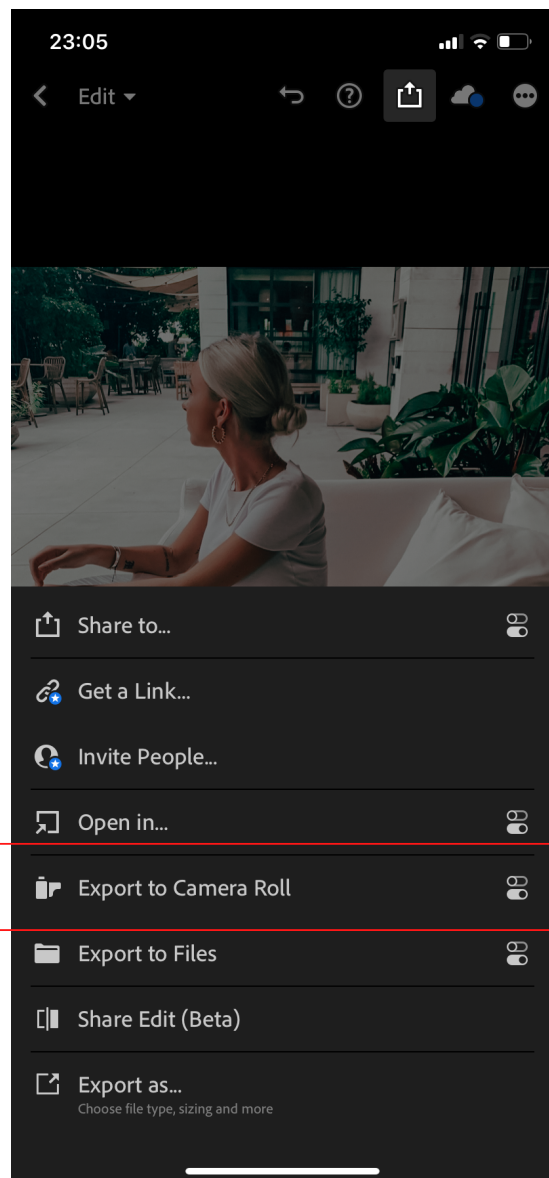

Unless you have created a new group, all of the presets will be found in the "User presets" group.

After applying the preset, click a check mark on the bottom right-hand corner.

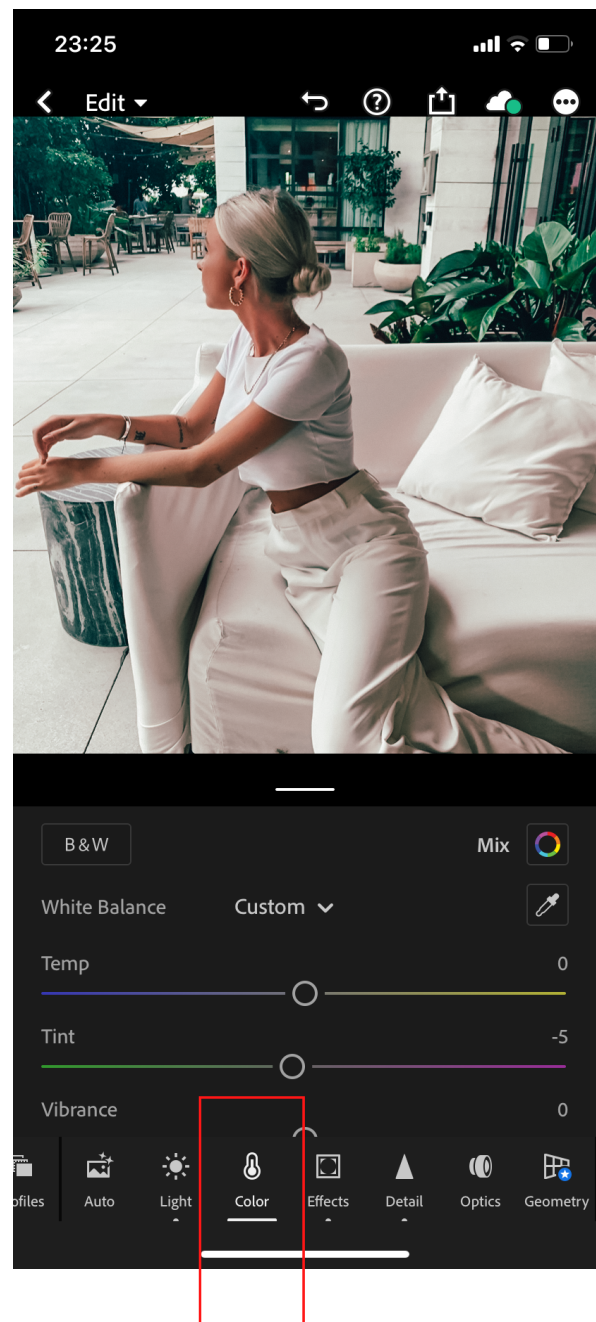

## Save your photo

To achieve the best possible results, keep in mind that each preset is unique (different settings for lights, shades and colors), so don't be afraid to "play" with the settings when using the same preset for different photos.

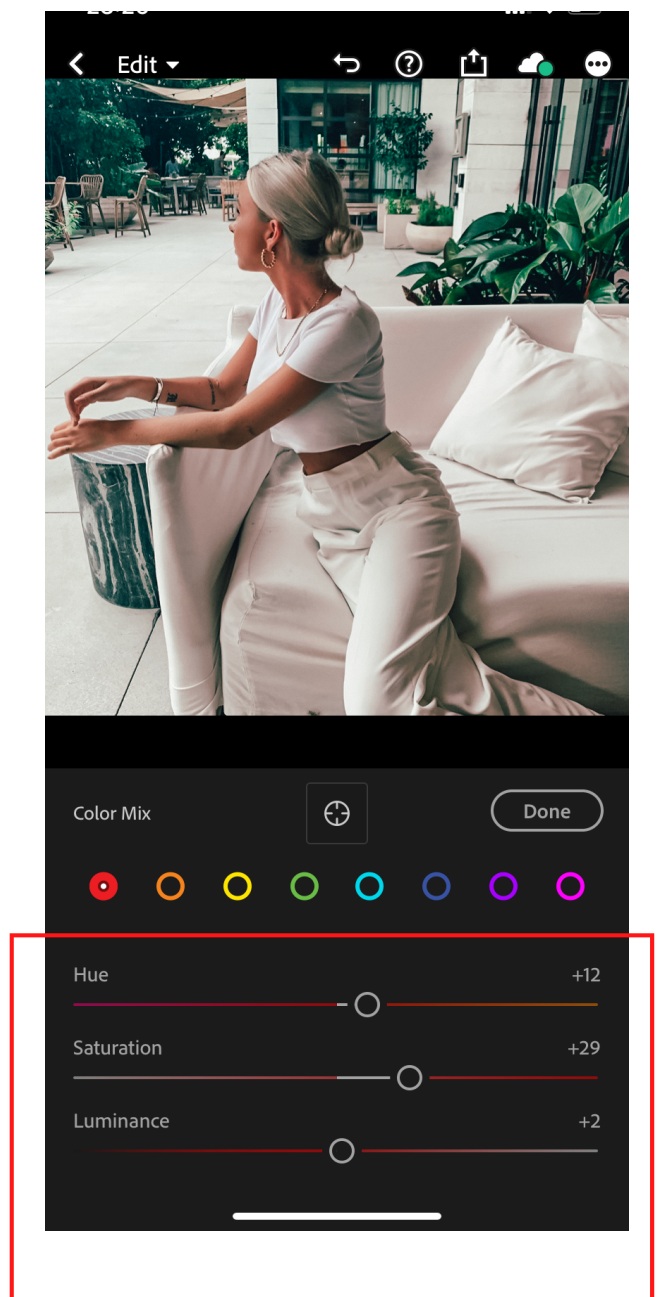

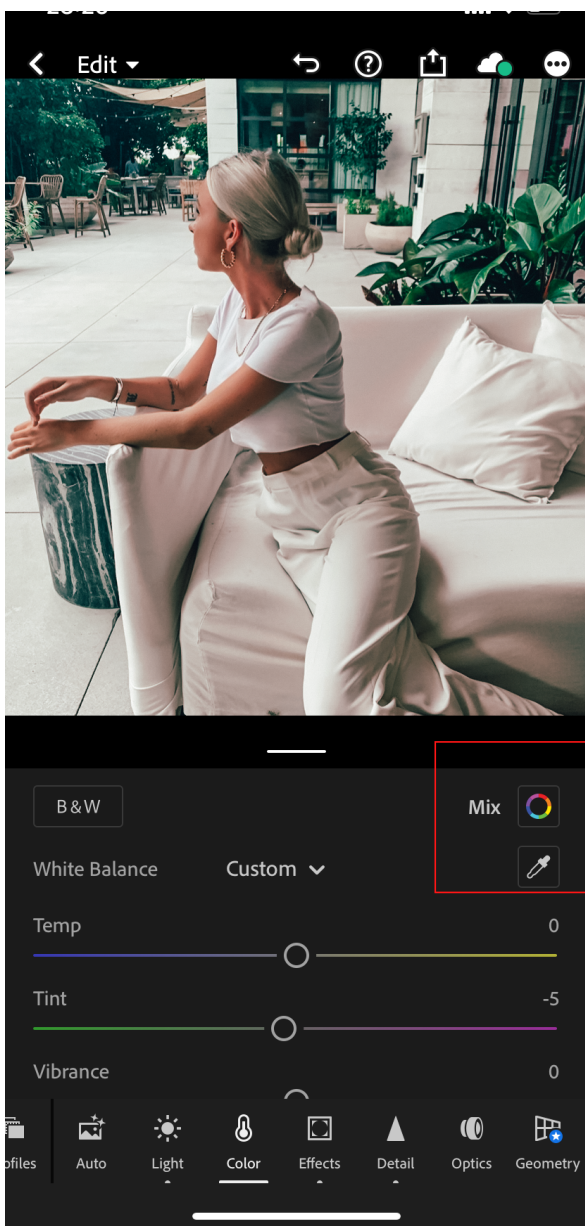

For example, if your photo is too light / dark, adjust settings of the "Light" section ("Exposure" / "Shadows" / "Blacks").

If your skin looks too light or dark after applying the preset, adjust the orange color setting. To lighten the sky, play with blue color and so on. (Colors -> Mix -> Hue / Saturation / Luminance).

Thank you for choosing
